- 2 Contract number 1878, dated February 20, 1969, with Michael Racioppi, Inc., for construction of a Bathhouse, Houghtons Pond, Blue Hills Reservation, Canton-Milton.
- 3 The Secretary submitted for approval a revokable permit to Carlo Brogna, 882 Highland Avenue, Medford, to excavate and use for a parking area, certain M.D.C. land situated in Medford, as shown on plan marked "Area Proposed to be Excavated and Used by Carlo Brogna, 882 Highland Avenue, Medford, for Parking, containing 400 square feet", being plan accession number 45653-A.
The Commission V O T E D to approve the permit, as presented, for use of an area of 400 square feet, more or less, but with the dimensions of 25'X 16', instead of 20'X 20' as originally approved; and to authorize the Secretary to execute same for and on behalf of the Commission.
- 4 At this point, the Commission V O T E D to approve the issuance of the following statement for the purpose of clarifying the present status of the Deer Island Sewage Treatment Plant:-
Charging flagrant distortion of the facts, the Metropolitan District Commission today declared that the sewage treatment process has been functioning since last May at the Deer Island Sewage Treatment Plant. The Commission said the Deer Island plant's present status has been misrepresented in a statement issued in the name of the Legislative Commission investigating the Deer Island facility. Erroneous information from this source and newspaper versions have ranged all the way from exaggerated cost figures to false claims of health hazards in Boston Harbor attributed to the Deer Island plant.
The truth is that the facility has been functioning effectively. Only the chlorination process has been temporarily suspended since January 6, 1969 for the customary winter season. Such suspension has been agreed to by the State Department of Public Health and the Division of Water Pollution Control. Full scale chlorination will be resumed by April first. The original design of the plant was approved by the Department of Public Health and did not provide for year-round chlorination. During this interim period, all other treatment processes are in effect. No raw sewage is being discharged from the treatment plant.
The facts are that this complex facility has been functioning almost completely except for short periods when necessary corrective and perfecting work has been performed during the "break-in" period. In addition, the M.D.C. has been pre-treating sewage through screening and grit removal at its two new headworks in Boston and one in Chelsea before flowing through two new under-harbor tunnels to Deer Island. The treatment procedures have had a significant improvement impact on conditions in Boston Harbor. Last Summer, the State Department of Public Health announced the Deer Island plant had cleared the way for reopening of four Winthrop town-owned beaches that had been closed since 1961. That agency also approved reactivation of two shellfish areas bordering Logan Airport for licensed commercial shellfishing, due to improvement in adjacent Harbor waters. The Commission stated that no beaches are threatened with closing because of the Deer Island plant. Recreation conditions under M.D.C. jurisdiction in Boston Harbor have been greatly improved.
The Deer Island plant's cost is approximately \$28.3 million, 4% above bid prices as shown by records of the State Comptroller -- not the \$64 million figure cited by the Legislative Commission. Substantial liquidated damages of over \$200,000 for delays and failure to meet specifications were assessed against a major contractor, contrary to reports that no penalties have been imposed. Intensive recruitment and training classes have filled 198 out of 234 authorized positions for the new headworks and the Deer Island plant, despite problems of low and largely non-competitive salaries, Civil Service procedures and a scarcity of trained personnel.
It was stressed that there are many sources of pollution of Boston Harbor from onshore outlets which are not under M.D.C. jurisdiction, control or responsibility. Chief among such outlets are the combined storm and sewer system overflows of Boston and several other communities which discharge mixtures of sewage and storm water. The control and elimination of these outlets are the responsibility of adjacent communities and other State Agencies, not the M.D.C. Provision is

now being made for future year-round chlorination as belatedly directed by the Public Health Department and the Division of Water Pollution Control.

During these winter months, the present chlorination equipment is receiving its annual required maintenance and renovation. Additional units required to comply with the recent year-round chlorination edict will be installed. It should be noted that the requirement for year-round chlorination and a greater dosage of chlorine will require an added annual expense of an estimated \$584,000, making the annual cost of chlorine alone an estimated \$821,250.00 which is equivalent to \$2,250.00 a day.

The first thing I noticed when I stepped out of the car was the cold. It was a sharp contrast to the warm blanket I had been sitting under. I looked up at the sky, which was a pale, hazy blue. The air was crisp and clean, a welcome change from the stuffy atmosphere of the car. I took a deep breath, feeling the cool air fill my lungs. The sun was just beginning to rise, casting a soft, golden glow over the landscape. The trees were still covered in a light layer of frost, and the ground was a mix of snow and bare earth. I felt a sense of peace and tranquility, a moment of stillness in a world that was always in motion. I walked slowly, savoring the quiet and the beauty of the morning. The world was so different from what I had been used to, and I felt like I had discovered a new part of myself. The cold was not a burden, but a gift, a reminder of the beauty of the natural world. I smiled to myself, feeling a sense of accomplishment and joy. The morning was perfect, just what I needed. I took another deep breath, feeling the cool air fill my lungs.
